

عذرًا! By Ben Clark عذرًا! **pdf drive** I would recommend to a friend (shows what sort of friends I have I suppose) :) 96 pages A decent enough list of commands/scripts for use in penetration testing with short descriptions. عذرًا! **pdfsand filter** This is a slightly terse version of the sort of notes most penetration testers will have already and I added a couple of these in to my own notes so it was worth the cost for that alone. عذرًا! **pdfsand filter** There are a couple of mistakes in the printed commands and some command under the wrong header but it adds to the fun when running through them all and scribbling in notes! 96 pages Really helpful information.
